

a. Notes about this Sprint such as what did you accomplish

Sprint 2 was very productive for our team. We each handled one specific part of our website. Firstly we collaborated on what we would like our website to look like (CSS). From there we split up the work into 3 main different sections. This included the creation of the homepage and nav bar, practice problems, and the class page where we would have information on different classes.

Overall we accomplished a lot and have a rough prototype of each webpage on our website.

Progress

- The navigation bar is done.
- Student resource and contact pages both are direct links to SU which are considered done.
- Main class page and subclass pages are mostly done with mainly styling and adding images required
- IDE integration into Practice page complete

b. How many cards did you complete as a team. Also break it down for each person

Jeremy: I completed 3 cards (start general class page and style of that page, Create external pages for each upper-level class, Work on multiple class pages adding the syllabus and prereq)

Tyson: I completed 3 cards (create wireframe, created the early stages of our homepage, and the general navigation bar for all of the pages)

Ethan: I completed 2 cards, I embedded an IDE into the practice page and created a question area.

Chi: I completed 2 cards (add multiple pages for different courses and fix href tags so pages are linked correctly)

c. How many Github commits did you complete as a team. Also break it down for each person

We currently have 73 Github commits completed as a team.

Jeremy: 6 commits

Tyson: 48 commits (mainly minor changes)

Ethan: 5 commits

Chi: 13 commits
